

SSI/SSDI Outreach, Access and Recovery

with 10 percent of the general prison population.

Incarceration and SSA Disability Benefits

Correctional facilities, whether jails or prisons, are required to report to SSA newly incarcerated people who, prior to incarceration, received benefits. For each person reported, SSA sends a letter to the facility verifying the person's benefits have been suspended and specifying the payment to which the facility is entitled for providing this information. SSA pays \$400 for each person reported by the correctional facility within 60 days. If a report is made between 60 and 90 days of incarceration, SSA pays \$200. After 90 days, payment is made.

The rules for SSI and SSDI beneficiaries who are incarcerated differ. Benefits for SSI recipients incarcerated for a full calendar month are suspended but if the person is released within 12 months, SSI is reinstated upon release if proof of incarceration and a release are submitted to the local SSA office. SSA reviews the individual's new living arrangements, and if deemed appropriate, SSI is reinstated. However, if an SSI recipient is incarcerated for 12 or more months, SSI benefits are terminated and the individual must reapply. Reapplication can be made 30 days prior to the expected release date, but benefits cannot begin until release.

Unfortunately, people who are newly released often wait months before their benefits are reinstated or initiated. Few states or communities have developed legislation or policy to insure prompt availability of benefits upon release. Consequently, the approximately 125,000 people with mental illness who are released each year are at increased risk for experiencing symptoms of mental illness, substance abuse, homelessness, and recidivism.

SSDI recipients are eligible to continue receiving benefits until convicted of a criminal offense and confined to a penal institution for more than 30 continuous days. At that time, SSDI benefits are suspended but will be reinstated the month following release.

Role of Transition Services in Reentry for People with Mental Illness

Since the 1990s, the courts have increasingly acknowledged that helping people improve their mental health and their ability to demonstrate safe and orderly behaviors while they are incarcerated enhances their reintegration and the well-being of the communities that receive them. Courts specializing in the needs of people with mental illness and or substance use disorders, people experiencing homelessness, and veterans are designed to target the most appropriate procedures and service referrals to these individuals, who may belong to more than one subgroup. The specialized courts and other jail diversion programs prompt staff of various systems to consider reintegration strategies for people with mental illness from the outset of their criminal justice system involvement. Transition and reintegration services for people with mental illness reflect the shared responsibilities of multiple systems to ensure continuity of care.

Providing transition services to people with mental illness within a jail or prison setting is difficult for several reasons: the quick population turnover in jails, the distance between facilities and home communities for people in prisons, the comprehensive array of services needed to address multiple needs, and the perception that people with mental illness are not responsive to services. Nevertheless, without seriously addressing transition and reintegration issues while offenders remain incarcerated, positive outcomes are far less likely upon release and recidivism is more likely.

Access to Benefits as an Essential Strategy for Reentry

The criminal justice and behavioral health communities consistently identify lack of timely access to income and other benefits, including health insurance, as among the most significant and persistent barriers to successful community reintegration and recovery for people with serious mental illnesses and co-occurring substance use disorders.

Many states and communities that have worked to ensure immediate access to benefits upon release have focused almost exclusively on Medicaid. Although

approval. This assistance is reimbursed to the County once participants are approved for Social Security benefits and receive retroactive payment. The number of arrests two years after receipt of benefits and housing compared to two years earlier was reduced by 70 percent (57 versus 17 arrests).

Mercer and Bergen County Correctional Centers, New Jersey. In 2011, with SOAR training and technical assistance funded by the Nicholson Foundation, two counties in New Jersey piloted the use of SOAR to increase access to SSI/SSDI for persons with disabilities soon to be released from jail. In each county, a collaborative working group comprising representatives from the correctional center, community behavioral health, SSA, the state Disability Determination Service (DDS), and (in Mercer County only) the United Way met monthly to develop, implement, and monitor a process for screening individuals in jail or recently released and assisting those found potentially eligible in applying for SSI/SSDI. The community behavioral health agency staff, who were provided access to inmates while incarcerated and to jail medical records, assisted with applications.

During the one year evaluation period for Mercer County, 89 individuals from Mercer County Correction Center were screened and 35 (39 percent) of these were deemed potentially eligible for SSI/SSDI. For Bergen County, 69 individuals were screened, and 39 (57 percent) were deemed potentially eligible. The reasons given for not helping some potentially eligible individuals include applications included not enough staff available to assist with application, potential applicant discharged from jail and disappeared/could not locate, potential applicant returned to prison/jail, and potential applicant moved out of the county or state. In Mercer County, 12 out of 16 (75 percent) SSI/SSDI applications were approved on initial application; two of those initially denied were reversed at the reconsideration level without appeal before a judge. In Bergen County which had a late start, two out of three former inmates assisted were approved for SSI/SSDI.

Prior to this pilot project, neither behavioral health care provider involved had assisted with SSI/SSDI applications for persons re-entering the community from the county jail. After participating in the pilot project, both agencies remain committed to continuing

such assistance despite the difficulty of budgeting staff time for these activities.

Fulton County Jail, Georgia. In June 2009, the Georgia Department of Behavioral Health and Developmental Disabilities initiated a SOAR pilot project at the Fulton County Jail. With the support of the facility's chief jailer, SOAR staff were issued official jail identification cards that allowed full and unaccompanied access to potential applicants. SOAR staff worked with the Office of the Public Defender and received referrals from social workers in this office. They interviewed eligible applicants at the jail, completed SSI/SSDI applications, and hand-delivered them to the local SSA field office. Of 23 applications submitted, 16 (70 percent) were approved within an average of 114 days.

SOAR benefits specialists approached the Georgia Department of Corrections with outcome data produced in the Fulton County Jail pilot project to encourage them to use SOAR in the state prison system for persons with mental illness who were coming up for release. Thirty-three correctional officers around the state received SOAR training and were subsequently assigned by the Department to work on SSI/SSDI applications.

SOAR Collaborations with State and Federal Prisons

New York's Sing Sing Correctional Facility. The Center for Urban and Community Services was funded by the New York State Office of Mental Health, using a Projects for Assistance in Transition from Homelessness (PATH) grant, to assist with applications for SSI/SSDI and other benefits for participants in a 90-day reentry program for persons with mental illness released from New York State prisons. After receiving SOAR training and within five years of operation, the Center's Community Orientation and Reentry Program at the state's Sing Sing Correctional Facility achieved an approval rate of 87 percent on 183 initial applications, two thirds of which were approved prior to or within one month of release.

Oklahoma Department of Corrections. The Oklahoma Department of Corrections and the Oklahoma Department of Mental Health collaborated

to initiate submission of SSI/SSDI applications using SOAR-trained staff. Approval rates for initial submission applications are about 90 percent. The Oklahoma SOAR program also uses peer specialists to assist with SSI/SSDI applications for persons exiting the prison system. Returns to prison within 3 years were 41 percent lower for those approved for SSI/SSDI than a comparison group.

Michigan Department of Corrections. In 2007 the Michigan Department of Corrections (DOC) began to discuss implementing SOAR as a pilot in a region where the majority of prisoners with mental illnesses are housed. A subcommittee of the SOAR State Planning Group was formed and continues to meet monthly to address challenges specific to this population. In January 2009, 25 DOC staff from eight facilities, facility administration, and prisoner reentry staff attended a two-day SOAR training. The subcommittee has worked diligently to develop a process to address issues such as release into the community before a decision is made by SSA, the optimal time to initiate the application process, and collaboration with local SSA and DDS offices.

Since 2007, DOC has received 72 decisions on SSI/SSDI applications with a 60 percent approval rate in an average of 105 days. Thirty-nine percent of applications were submitted after the prisoner was released, and 76 percent of the decisions were received after the applicant's release. Seventeen percent of those who were denied were re-incarcerated within the year following release while only two percent of those who were approved were re-incarcerated.

Park Center is a community mental health center in Nashville, Tennessee. In July 2010, staff began assisting with SSI/SSDI applications for people with mental illness in the Jefferson County Jail and several facilities administered by the Tennessee Department of Corrections, including the Lois M. DeBerry Special Needs Prison and the Tennessee Prison for Women. From July 2010 through November 2012, 100 percent of 44 applications were approved in an average of 41 days. In most cases, Park Center's staff assisted with SSI/SSDI applications on location in these facilities prior to release. Upon release, the individual is accompanied by Park Center staff to the local SSA

office where their release status is verified and their SSI/SSDI benefits are initiated.

Best Practices for Accessing SSI/SSDI as an Essential Reentry Strategy

The terms jail and prison are sometimes used interchangeably, but it is important to understand the distinctions between the two. Generally, a jail is a local facility in a county or city that confines adults for a year or less. Prisons are administered by the state or federal government and house persons convicted and sentenced to serve time for a year or longer.

Discharge from both jails and prisons can be unpredictable, depending on a myriad of factors that may be difficult to know in advance. Working with jails is further complicated by that fact that they generally house four populations: (1) people on a 24-48 hour hold, (2) those awaiting trial, (3) those sentenced and serving time in jail, and (4) those sentenced and awaiting transfer to another facility, such as a state prison.

Over the past several years, the following best practices have emerged with respect to implementing SOAR in correctional settings. These best practices are in addition to the critical components required by the SOAR model for assisting with SSI/SSDI applications.¹¹ These best practices fall under five general themes:

- f Collaboration
- f Leadership
- f Resources
- f Commitment
- f Training

Collaboration. The SOAR approach emphasizes collaborative efforts to help staff and their clients navigate SSA and other supports available to people with mental illness upon their release. Multiple collaborations are necessary to make the SSI/SSDI application process work. Fortunately, these are the same collaborations necessary to make the overall transition work. Thus, access to SSI/SSDI can become

¹¹ See <http://>

a concrete foundation upon which to build the facility's overall discharge planning or reentry process.

exams with 90 days of application, access to records, physician or psychologist sign off on medical summary reports).

Resources. Successful initiatives have committed resources for staffing at two levels. First, staff time is needed to coordinate the overall effort. In the Mercer
