Major Research Area Paper Presentation

An Empirical Study on Team Formation in Online Games by

Essa Alhazmi

For the Ph.D. degree in Computer Science & Engineering

Online games provide a rich recording of interactions that can contribute to our understanding of human behavior. One potential lesson is to understand what motivates people to choose their teammates and how their choices lead to performance. We examine several hypotheses about team formation using a large, longitudinal dataset from a team-based online gaming environment. Our dataset covers over two months of in-game interactions between over 359,000 players. We show that familiarity is an important factor in team formation, while homophily is not. Competence affects team formation in more nuanced ways: players with similarly high competence team-up repeatedly, but large variations in competence discourage repeated interactions.

Wednesday, December 5, 2018 12:00 PM ENB 337 THE PUBLIC IS INVITED

Examining Committee
Adriana Iamnitchi, Ph.D., Major Professor
John Skvoretz, Ph.D.
Paul Rosen, Ph.D.
Yao Liu, Ph.D.
Giovanni Ciampaglia, Ph.D.
Kingsley Reeves, Ph.D.

Yu Sun, Ph.D. Graduate Program Director Computer Science and Engineering College of Engineering Sudeep Sarkar, Ph.D.
Department Chair
Computer Science and Engineering
College of Engineering

Disability Accommodations:

If you require a reasonable accommodation to participate, please contact the Office of Diversity & Equal Opportunity at 813-974-4373 at least five (5) working days prior to the event.
